Application: Android Developer

This is Sahil Dave, an Android Developer who focuses on user experience while creating a product. I was delighted to see a vacancy in Mobile Development team of your company and believe I would be a good match for it. Although the requirement lists 3 years of experience, my learning over the past 2 years makes me a perfect candidate.

I try to create customer delight in all the aspects of my products, from user interface, customer relations to marketing. As I contributed in everything from software development to book deliveries in the venture co-founded by me, Ostrich Books, I have gained a lot of insights and experience in this field. I also do full stack development for some of my personal projects. Being comfortable with python, I have had experiences hosting backend on AWS and Heroku.

I am a quick learner which helps me not only be updated with all the technological changes happening but also on a personal level. My interests and proficiency in foreign languages like German and sports like football and running speaks about my dedication. My knack for good design helped me create merchandises, social media posts and other branding related projects too for Ostrich Books. Some of those designs can be found on my Behance page - [behance.net/sahildave](https://www.behance.net/sahildave).

I am looking for an opportunity wherein I can work with a team sound in tech & design as an Android Developer. Beyond that which is already mentioned in my attached resume, you can also go through my website and github for more information. I have a proven track record of being able to conceive, develop & execute strategies. I feel strongly that my skills would be of immediate benefit to your company.

Thanks a lot and looking forward to hearing from you soon.

Sahil Dave
Android Developer
